

AGREEMENT SIGNED WITH BGLOBAL TO PROVIDE DIGNITY WITH SMART METERING

22nd March 2011

Bglobal plc (AIM:BGBL), the leading provider of smart metering solutions and energy information management services to the UK energy market, announces that its subsidiary, Bglobal Metering Limited, has signed an agreement with Dignity plc (LON:DTY), a leading provider of Funeral Services.

Bglobal will supply, install and service its latest generation of smart electricity meters to Dignity sites throughout the UK, following a successful pilot. Bglobal will also supply data collection and analysis services, and continue to provide Energy Consultancy.

Bglobal remains the largest provider of remotely read non half hourly smart meters in the UK with over 150,000 meter installations to date and has developed a wealth of expertise in the deployment of installation projects across industry sectors.

John Furness, Group Sales Director at Bglobal plc, commented: *"We are thrilled to be supporting Dignity in their commitment towards smarter energy management and carbon reduction. Bglobal Smart Meters will provide the team at Dignity with accurate electricity bills and clear energy data, to allow them to introduce energy initiatives across their UK wide property stock."*

Commenting Richard Portman, Corporate Services Director at Dignity said, *"We are delighted to strengthen our existing relationship with Bglobal, and welcome their wide expertise in supporting the roll out of Smart Metering. Dignity recognises the need to do all we can to reduce our impact on the environment and to control any unnecessary use of energy. Smart Metering from Bglobal is a further step towards that vision."*

Notes to Editors

About Bglobal Metering

Bglobal Metering are specialists in energy measurement and management – and help companies significantly reduce energy costs, meet the Carbon Reduction Commitment and get smart about energy.

Bglobal delivers a comprehensive suite of services for managing electricity and gas utilities including installation and maintenance of smart settlement meters and sub-meters, data collection for billing and

settlements, and analysis tools which help customers make informed decisions on energy and save money.

About Smart Metering

The next generation of “smart” utility metering technology eradicates the need for inaccurate estimated billing and provides 100% accurate, real time energy consumption information. Bglobal does not read meters by any other means than remote communications, such as GPRS via a SIM Card.

This provides up to the moment accurate data from any meter at any time, allowing consumption analysis and energy management to be performed based on accurate information. Customers who have implemented Bglobal Smart Meters have saved significant sums of money and energy.

Other Services Provided

Bglobal is also able to provide Energy Consultancy services such as Energy Procurement, Bill Validation, Tariff Management, Consumption Analysis, Site Comparisons and an online Web Analyser service which allows customers to view consumption profiles for each site.
