

In 2009, ATS Euromaster embarked on a journey to reduce carbon, smarten up energy usage across their business, and save money.

The project included a suite of energy services and an installation plan of just over 500 smart meters fully managed by Bglobal.

ATS Euromaster & Bglobal Metering Case Study 2011

The Need:

As one of the largest comprehensive tyre service providers in the UK, ATS Euromaster is committed to managing the environmental impact that arises from the work that it does. As a result of this commitment it appointed Bglobal Metering to supply and install over 500 non-half-hourly (NHH) Smart Meters into its sites across the UK.

This has allowed ATS to collect and, more importantly, act upon highly accurate energy consumption data.

In addition to the core NHH Smart Metering service, Bglobal Metering has also provided a range of energy consultancy services to ATS to help cut their energy consumption and spending. This was only made possible by conducting an in depth analysis of the data that was generated from the Bglobal Smart Meter.

The Solution:

- NHH Electricity Smart Metering
- Energy Procurement
- Electricity and Gas Market Consultancy
- Change of Supply and Energy Tariff negotiations
- New Connections and Disconnections
- Billing Reconciliation and Disconnections
- Quarterly Energy Reports
- Monthly Consumption Budget Reporting
- Divisional Consumption Reporting
- Site Exception Reporting
- Creation of Ad-hoc Reports to resolve specific issues arising

“We receive various ‘standard’ reports from Bglobal that allow us to make strategic decisions based on accurate information. We asked them to develop a bespoke report on Out of Hours energy consumption across all of our centres which allowed us to identify and resolve areas of overuse and inconsistency.”

**Andy Evans, Head of Property and Services,
ATS Euromaster**

Bglobal Metering are the market leaders in end-to-end electricity smart metering for UK business, and the preferred AMR provider to major energy suppliers offering a comprehensive direct customer service.

Key Benefits:

During 2010, Bglobal Metering's Energy Services team was able to generate ATS a staggering **61%** net saving on its annual gas expenditure, by managing estimated gas bills received from suppliers and ensuring validation and accuracy.

Over the period from 2008 to 2010, Bglobal Metering was also able to make net savings for ATS on billed NHH electricity of over **7%** through the energy consultancy services provided.

"The 61% saving on our gas expenditure in 2010 was considerably more than we could have hoped for. In electricity, which accounts for a much larger proportion of energy consumption, the 7% saving has made a direct impact on our bottom line.

As well as the obvious financial savings that we have experienced, we have been able to reduce overall energy consumption, reducing the environmental impact of our operations, which remains a key commitment of ours."

**Andy Evans, Head of Property and Services,
ATS Euromaster**

"Amongst the various services provided to ATS Euromaster, bill validation and revenue recovery is a relatively straightforward proposition, but as has been proven, it can deliver huge savings. However, it is only possible to obtain these benefits if there is accurate energy consumption data available from a smart meter."
