

Data Analysis is a crucial step in the Bglobal Smart Energy Journey and effective action in this area is vital in achieving energy efficiency and improving financial performance.

The workshop was undertaken at Bglobal's head office to help customers achieve a hands-on experience of Bglobal's energy management software and learn new ways to meet current energy management requirements.

The session was tailored to encourage the attendees on how to become energy efficient and unlock wasted cash in to their business.

The workshop covered a variety of topics to address specific energy management requirements faced by most businesses, enabling energy managers to improve efficiency through:

- ✓ *Proactively managing exceptions*
- ✓ *Finding out if their energy supplier is billing the right tariff*
- ✓ *Identifying where cash and CO2 are being wasted*
- ✓ *Getting information to the people that will act on it*

To find out how to organise a **FREE Energy Management Workshop** – please contact your Bglobal Account Manager today.

Thomas Cook Group plc

Thomas Cook appointed Bglobal to install Non Half Hourly Smart Meters in their retail outlets, using WebAnalyser as a key tool to manage energy usage across their sites. Claire Pick, Energy Services Manager of Thomas Cook believes ***“the training session delivered a hands on review of setting up main reports and how to get the best out of the system. The session was done in small groups and the duration was about right.”***

Value can easily be generated through the data collected from smart meters, helping to unlock cash in any business and allowing users to quickly identify opportunities for energy saving.

Thomas Cook’s ***“cash flow has improved significantly due to the elimination of estimated bills, offering an improved overview of energy consumption”***.

WebAnalyser comes with ‘off the shelf reports’ that can be configured to meet business needs.

Claire mentions that ***“scheduling reports is a very useful tool and can act as a reminder for action, especially when busy, as well as alerting you on when and where energy can be saved.”***

Bglobal Metering installed Non Half Hourly Electricity Smart Meters in Yorkshire Building Society’s premises nationwide. In addition to the Smart Metering installations, Yorkshire Building Society has been using WebAnalyser to monitor energy usage across a large portfolio of properties.

Alison James, Environment & Energy Co-ordinator of Yorkshire Building Society, commented, ***“the training session was very informative and useful, providing a good overview of the whole WebAnalyser package and ways to reduce energy spending.”***

Typically data obtained from the system equips Yorkshire Building Society with the tools to ***“benchmark properties against each other, whilst helping the organisation’s budgetary needs.”*** Alison summarised some key benefits, which include: ***“a good variety of reporting available and the ability to monitor consumption, down to every half hour”***.

Bglobal has installed smart meters and procured energy for Dignity Funeral Homes, as well as providing access to WebAnalyser. The smart meter installation program is currently underway; therefore the training session took place at a crucial time, helping Dignity ascertain a better understanding of the different features available. Steve James, Fixed Asset Accountant of Dignity Funeral Homes, thought *“the training session was excellent as it increased my knowledge of the various features in WebAnalyser and would recommend it to any company with multiple sites, which is looking at ways to identify energy and cash savings”*.

“The training session was very good; it was set up for hands on training with the ability to follow the trainer”
